Agentic AI SDLC

Vision

Transform software development to an AI-Augmented engineering life cycle, improving code quality while dramatically reducing the time and cost to build.

Success Criteria

- Time to Build
- Cost to Build
- Code Coverage & Quality

AI SDLC - Experiences V2.pptx

- Agentic SDLC Copilot - High Level Architecture
- Experiences
- Core
- TruCare
- HIH

Roadmap

📈 Phase 1: Expand Current Success

- Apply UPX playbook to remaining dashboard features in 2025
- Measure and track time/cost savings
- Refine playbook based on learnings

🏗️ Phase 2: Build Playbook Library

- Create domain-specific playbooks (Dashboard, Case Build, Auth Look-up, etc)
- Standardize provider experience coding practices
- Develop Testing, Deployment & Observability Playbooks

👩‍💻 Phase 3: Transform Workforce

- Upskill developers and testers for AI collaboration
- Establish new role definitions and workflows

🎯 Phase 4: Enterprise Scale

- Deploy across all experiences teams in UPX & UCX
- Integrate with all existing tools & DevOps pipelines
- Measure enterprise-wide productivity gains

Provider Experiences - Future State AI-SDLC

Main Highlights

Domains & Sub-Domains KB

Model the repositories into domains to build knowledge bases with deep understanding of the domain intricacies and complexities

Role Compression

Product Owners, Developers, testers & DevOps roll into Product Engineers & Prompt Engineers

Agentic SDLC

Autonomous agents to execute playbooks for coding, testing, deployments and observability. Human in the Loop is the Product Engineer

Full Scale Integration with Tool

Integrate all existing tools with Agentic SDLC Orchestrator
