Orchestrating Intelligence

Prepared by XPG

MCP
It’s not just a protocol—it’s the foundation for AI that thinks in real-time, with your data, your tools, your context

Reimagining AI with Model Context Protocol (MCP)

Imagine an AI that doesn’t just respond—but understands your world.

- **Unified Access to Data**
  MCP allows AI models to connect to various data sources (such as APIs, databases, or files) through a single, standardized protocol. This eliminates the need for custom integrations for each data source endpoint.

- **Real-Time Information Retrieval**
  Instead of relying solely on static, pre-trained knowledge, AI models using MCP can fetch live data—making their responses more accurate and context-aware through Natural Language Processing capabilities.

- **Tool Integration**
  MCP enables AI models to interact with external tools, expanding their capabilities beyond just text generation to include dynamic data processing and real-time interactions.

- +It’s the difference between a smart assistant and a strategic partner

MCP Integration in healthcare workflow

1. **Doctor** requests diagnostic help from the AI Assistant
2. **AI Assistant (LLM)** sends a request via the MCP Client
3. **MCP Client** forwards the request to the AMS MCP Server using the protocol
4. **AMS MCP Server** retrieves relevant data from the EHR System
5. **AMS System** returns patient data back to the AMS MCP Server
6. Data flows back through the **MCP pipeline** to the Client
7. **MCP Client** provides the structured data to the AI Assistant
8. **AI Assistant** analyzes the data and responds with diagnostic suggestions to the **Doctor**

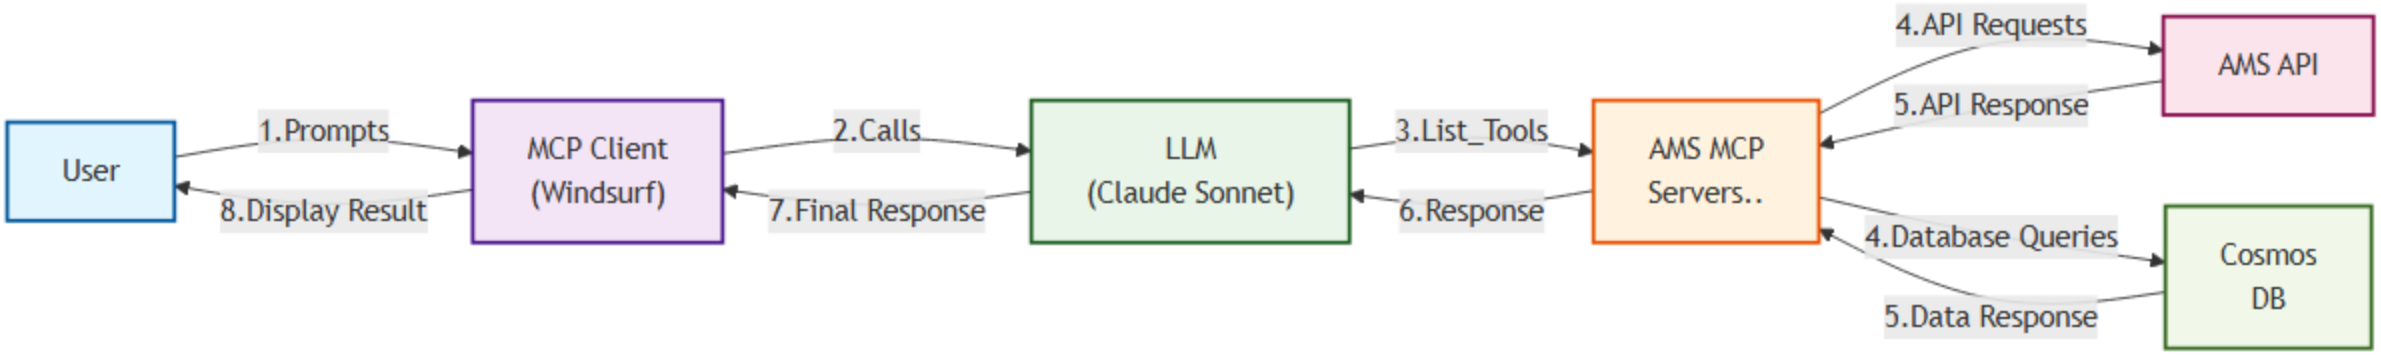
POC: MCP using Windsurf AI

Demo of Real-time interaction

AI tools pulls data from internal EviCore system (AMS) using human like language



#For the sake of POC we've kept certain guardrails out of scope for the initial phase to allow more flexibility and exploration

POC: MCP using Windsurf AI

Who all could be the audience for MCP enabled apps

- Nurses / MD's
  - Case Details, Case history , Scan Status, Eligibility Lookup, member info
- UMSE / BA / PO / PM etc.
  - Prod stats from app Insights for Case Journey, Jira MCP
- Webx Bots user, DevOps
  - Analyze logs from multiple services as per bot is targeted, Trigger CICD, check pipeline status ,fetching deployment logs etc

How can we make MCP enabled apps available to Audience

- Chat Bots on Web , UI apps
- Internal MCP Portal like ChatGPT for UM Services
