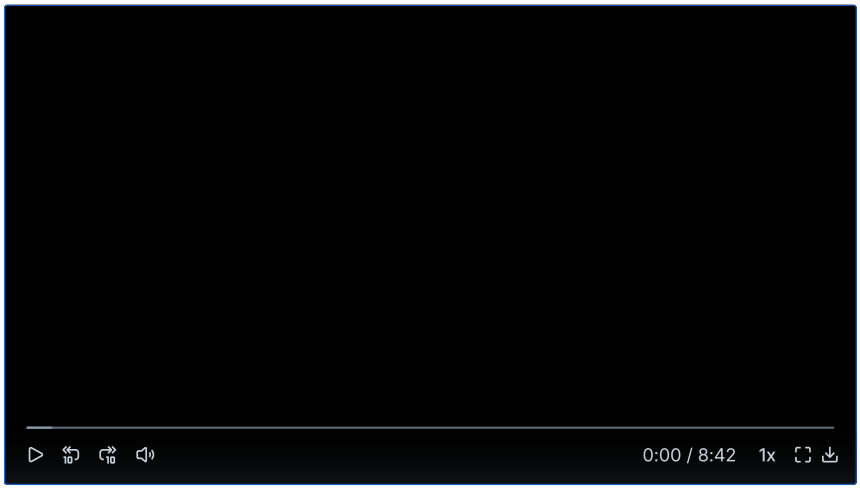
PR Review using MCP - GHCP



Video Link - [Aarti Patil (Offshore)'s meeting-20250911 1633-2 - eviCore Healthcare]

Prerequisites -

1. VS Code
2. GitHub Copilot
3. Node JS - Check Version (node --version)
4. NPX - Check Version (npx --version)
5. Azure CLI - Check azure CLI command prompt in applications list.
6. Organization Name - For ex. - “eviCoreDev”

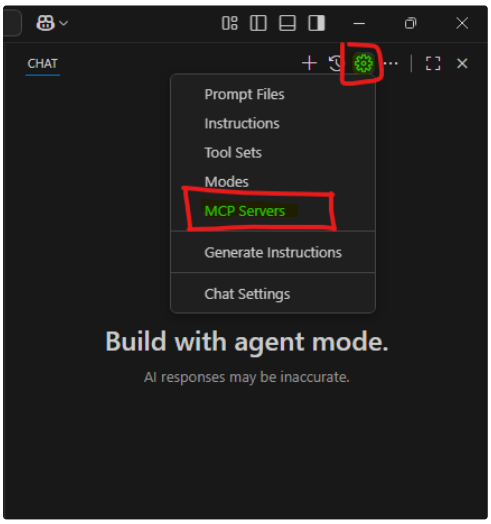
Author - Bhushan Patil

Note - Do not try it on VMs, it will only work on VDI. Due to CIGNA security policy.

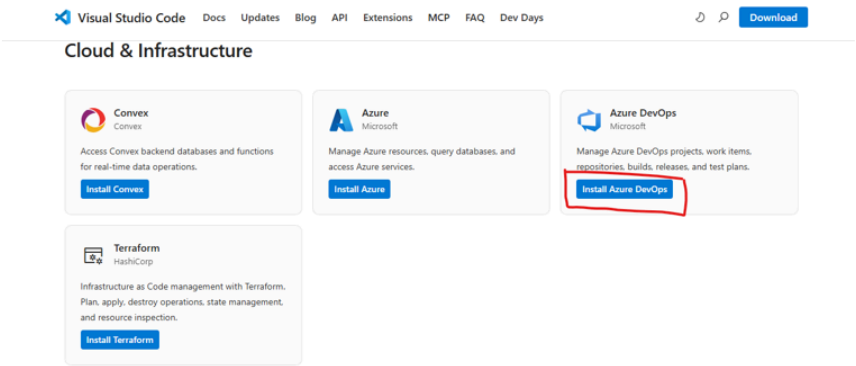
For any queries regarding setup, please contact.

Setup MCP Server -

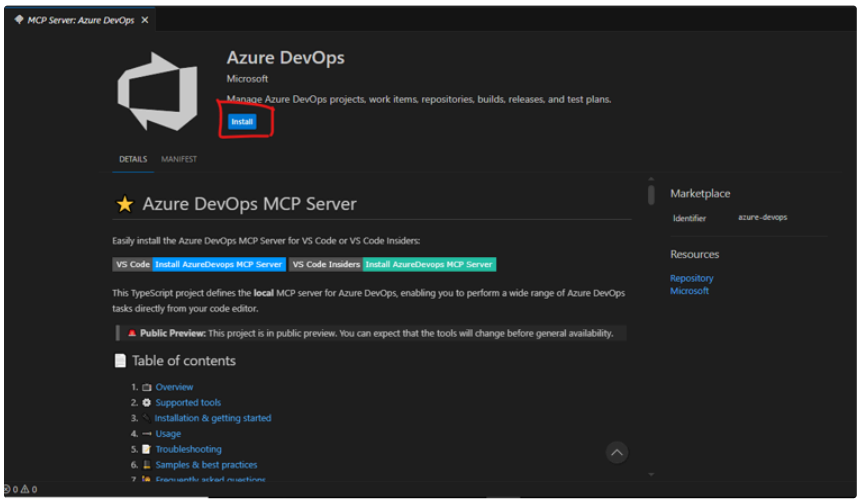
Step 1 - Click On Setting Icon and Then click on MCP Servers.
If it didn't redirect you, click here - "Discover and install MCP Servers in VS Code"



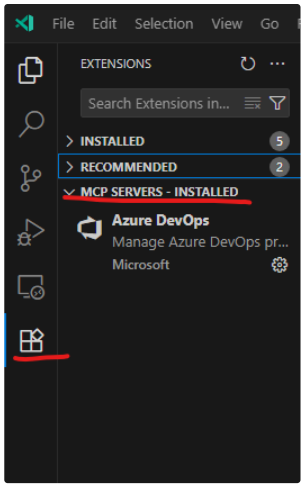
Step 2 - Install Azure DevOps Extension.



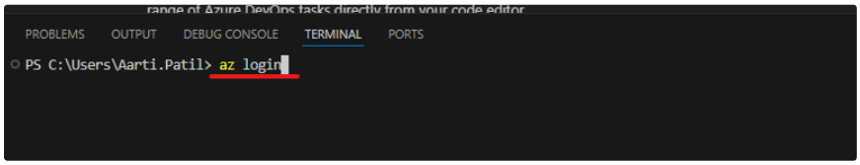
Step 3 - It will redirect you to VS Code. Click on Install.



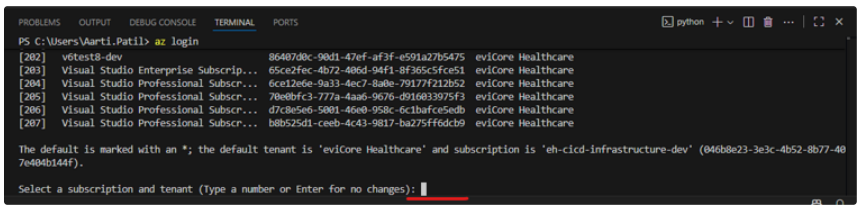
Check after installation, it should show option like these.



Step 4 - Open Terminal in VS Code and type “az login” (for these Azure CLI should be installed)

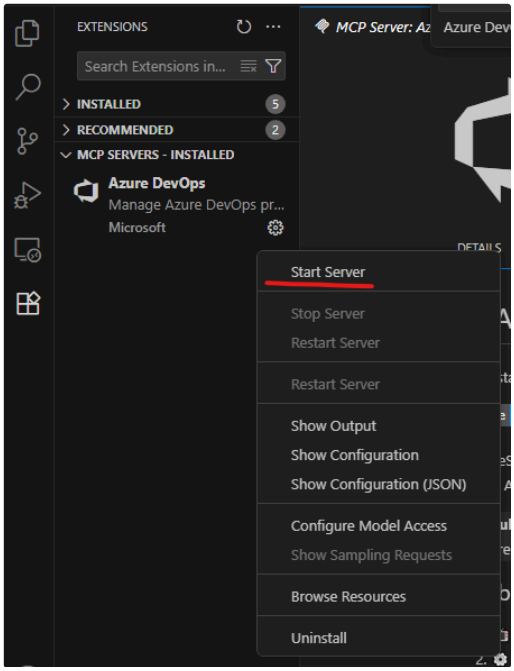


It will open azure login, please login into Azure DevOps.

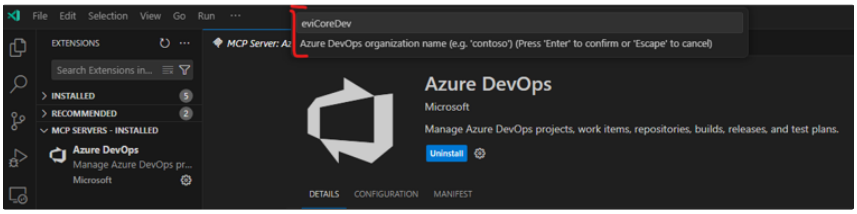


Simply **ENTER** do not change anything.

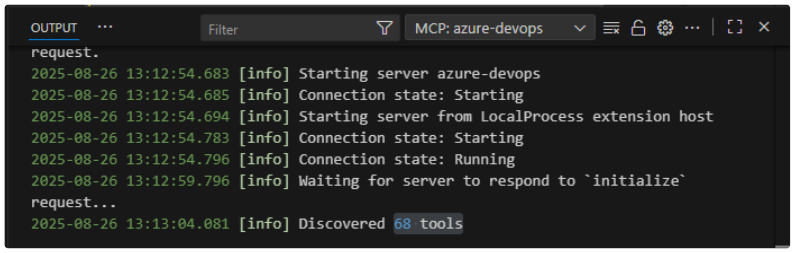
Step 5 - Click on Start Server.



Step 6 - It will ask for Organization name - “eviCoreDev”

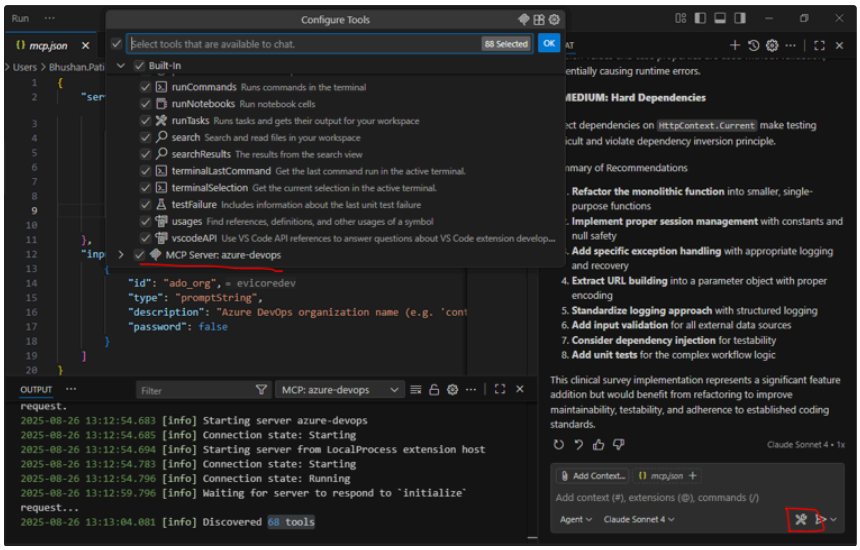


Step 7 - Verify All the tools are imported.



First click on Configure Tools Tab (Left side of send button in Copilot).

It will open a tab and you can see all the Azure DevOps MCP tools available.



Hurrey, now you can use Azure DevOps for various tasks.

PR Review using Copilot -

```
#repo_get_repo_by_name_or_id
{
  "project": "ImageOneDomainApps",
  "repositoryNameOrId": "drugeligibilityapi"
}
and review the pull request number 135801,
also check code standards in changes.
Can you give comments with the code reference?
and also give the changes for the comments provided.
```

Change Project name, Repository Name and Pull Request ID.

At first, it will be having some issues while connecting to Azure DevOps. After some trials, it will start working excellent.

⭐ For pushing comments directly into the PR use prompt.

All the comments will be added by your name.

```
Can you add this comments in Pull request?
```

Extras -

Still now working, please check mcp.json

```
{
    "servers": {
        "azure-devops": {
            "command": "npx",
            "args": [
                "-y",
                "@azure-devops/mcp",
                "${input:ado_org}"
            ]
        }
    },
    "inputs": [
        {
            "id": "ado_org",
            "type": "promptString",
            "description": "Azure DevOps organization name (e.g. 'contoso')",
            "password": false
        }
    ]
}
```
